

Fire Risk Assessment

As a responsible fire safety company should be, we offer our clients an in depth fire risk assessment of their premises, whether this may be residential, commercial or industrial.

The function of carrying out a fire risk assessment in a building is to ascertain how safe a premises from fire, and do the current procedures in place conform to the relevant standards.

Following a comprehensive survey from one of our fire assessors we provide a detailed report of a building specifically in relation to fire safety procedures with particular emphasis on;-

- Detection
- Activation
- Prevention
- Control
- Management & records
- Means of escape
- Health & safety signage

As competent industry professionals our recommendations and guidance allow those who are accountable, employers and or senior management clearly understand their duties, functions and responsibilities with regard to fire safety. Based on our experience over a duration of twenty years in the fire safety industry our clients are then confident to implement the appropriate precautions and establish best common practice.
